Example (B)

2.55.250 Climbing Cube «Flexi» CHECKLIST

The cube is a mathematical body formed by six equal squares. The individual squares can be fitted with a variety of climbing, balancing, brachiating and seating elements. Communication, movement, coordination and strength, the basic elements of a healthy development of students' bodies and minds are all stimulated by this. The climbing cubes can be assembled and upgraded individually. Colour accents can put highlights on the squares, edges or installed elements, which enhances the definition of space.
